

LED LIGHTING PROFILES

LUXX Light Technology

ABOUT US

LUXX Light Technology is a German-headquartered International group of companies with lighting competence and innovation for over 20 years.

LUXX is dedicated to slim and energy efficient linear lighting fixtures since 1997

1997 Introduction of CCFL (cold cathode fluorescent lamp) slim and energy efficient linear lighting fixtures	2012 Introduced LED commercial lighting fixtures and replacements	2014 Presented LED commercial refrigeration, fresh food, vending and shelf lighting	2018 Introduction of Lightpanel AIR of edge lit panels with standard and custom options and Snap and SEG frames
2006 Developed LED ultra-slim and energy efficient linear lighting fixtures	2013 Developed LED industrial lighting fixtures	2016 Expanded Lighting profile line to include linear, flexible and accessories	

Product Development

Using our own R&D department and our own design engineers we are able to develop customized profiles and complete solutions for various applications. We specialize in retail, commercial and industrial applications including food lighting, high-quality consumer products or exhibition stands. We offer the “complete package” including end caps, mounting clips, strain reliefs and many more options.

Since we use our own toolings we guarantee a consistent quality for all of our profiles at all times.

Have a product idea or in need of a profile that is not included in our standard range? Talk to us! We are OEM experts and happy to work together with you to find the right solution.

We stock most standard lengths and offer custom lengths.

LED LIGHTING PROFILES

ALUMINIUM

All of our aluminium profiles come with acrylic (PMMA) or PC covers in clear transparent, frosted or milky options, providing easy mounting:

- Step 1. fix the aluminium profile
- Step 2. tape the LED strip inside
- Step 3. insert the cover from the top

This is the best mounting option for inside cabinet walls and other limited spaces. This provides superior thermal design.

Our aluminium product line includes aluminium profiles for surface, recessed and suspended mounting options.

For surface mount, we always use spring steel clips to avoid the breakage of plastic clips.

All our aluminium profiles are made of anodized aluminium alloy 6063.

LINEAR ALUMINIUM

Our linear aluminium profile series boasts an absolutely linear light appearance with no visible LED dots or spots.

This provides the mounting advantages of an aluminium profile with the linearity of our plastic profiles and superior heat management.

NEW FLEXIBLE PROFILE

We proudly present a new flexible PVC profile. It can easily follow your product shape and can be used in corners and on edges. Various colors allow adapting the profile to your product or your CI.

PLASTIC

We have a long history with plastic profiles. We know how to create linear profiles that have the smooth lighting effect of fluorescent tubes, while also avoiding the "dot or spot effect" of LEDs, by using optical batches during the extrusion.

All our plastic profiles are made of PMMA (acrylic), some covers for the aluminium profiles are made of PC.

All PMMA profiles are manufactured using a high temperature batch, which increases the softening temperature from 185°F (85°C) to 257°F (125°C). We are presumably the only manufacturer in China offering this as a standard.

Some profiles are made as co-extrusions to offer a wide selection and combination of colors and diffusers. Some profiles are made using either softening, high impact, light-stopping chalk, optical (diffusing), frosted or nano batches or a combination of these - all on top of the high temperature batch.

With proper sealing, our plastic profiles offer an IP54 or IP65 protection.

One profile for multiple lighting beam angles:

The OPTICline Alu 12 profile offers an asymmetric inserting rail that can be placed in 2 different positions or left out. Combined with the lens type cover it offers 5 different light beam angles (depending on the LED size and height, using LUXx reference LED strips: 20° to 90°). This focuses the light and creates

[no wings / wings]	CP10PM5M08 / CP10PM6M11 [milky]
Mounting	MD31SSU110 [clip]

The MULTILine Alu 16 profile also works as a mounting rail for the LineProfil 12 and LineProfil 14-8 (see pages 51-52) plastic profiles. The profiles can be inserted easily from the sides. Especially for installations longer than a meter this is a perfect solution to avoid the bending of the plastic profile. Using a staggered way of mounting, it also ensures a smooth linking of multiple profiles for lengths over 98.43 in [2.5 m].

MULTLine Alu 16

*Endcap set 1: adds 0.12 in (3 mm) on one side and 0.16 in (4 mm) on the other side to the length of the profilet, the latter offering a 5-ways wire exit (for IP54 linear wire exit only).

*Endcap set 2: adds 0.08 in (2 mm) on one side and 0.16 in (4 mm) on the other side to the length of the profile, the latter offering a 5-ways wire exit. It has an IP54 sealing on both sides.

The MULTLine Alu 16 profile (see page 34) also works as a mounting rail for the LineProfil 12 and LineProfil 14-8 plastic profiles. The profiles can be inserted easily from the sides. Especially for longer installations (more than 39.37 in/1 m) this is a perfect solution to avoid the bending of the plastic profile. Using a staggered way of mounting, this also ensures a smooth linking of
